

Spectral Pendant chandelier systems

H Profil chandeliers

Chandeliers that other look up to.

LED

An elegant concept offering endless possibilities for spaces, whether they are heritage buildings or modern architecture. H-Profil is designed to easily accommodate a wide range of high power LED sources and decorative accessories for both direct and indirect lighting. Its ability to form acute curves allows huge design flexibility and our bespoke service enables you to bend and perfectly shape it to your project.

Strength and Flexibility.

Twin, interlocked strong aluminium extrusions form the rigid spine of the lighting system. Uniquely, the luminaire system body can be formed into smooth curves in the factory, fitting exactly with the contours of the room.

H Profil chandeliers

Non standard is the standard.

LED

Highly complex wall washers and LED spots are available through to fluorescent lamps with micro prismatic panels to reduce glare and decorative glass inserts.

Every element of the H-Profil system can be freely assigned to individual lighting plans.

A myriad of combination and formation possibilities are available. Elegant opal glass shades or LED downlighters with up to 3000 Lumens and specific optics to suit the project. Or simple elegant cast acrylic blocks for a more modern sophisticated look. Any RAL colour is available.

Got an idea?

We can fully render your ideas to assist in fine tuning your design.

The chandeliers are manufactured in Germany to exacting standards. They are very robust, pre wired and tested to the highest standards at the factory. They are packaged in special cases and delivered using lorries dedicated to the factory.
